TABLE OF CONTENTS FOR "CONSTRUCTION AND OPERATION
OF ELECTRIC TRANSMISSION LINES IN AREAS SUBJECT TO SEVERE ICING"

This book by V. V. Burgsdorf, Doctor of Technical Sciences, describes operating conditions for electric transmission lines in very cold areas, gives details of the basic principles of their design, and discusses measures required to minimize icing effects. It is written for engineers.

TABLE OF CONTENTS

	<u>Page</u>
Preface	3
Part I. Formation of Ice and Frost on Transmission Line Conductors	
1. Ice and Frost on Electric Transmission Lines, as an Engineering Problem	7
2. Physical Phenomena in the Formation of Ice and Frost, and Questions of Classification	10
3. Peculiarities in the Formation of Ice and Frost on Electric Transmission Lines	21
4. Review of Cases of Large Formations of Ice and Frost and of Breakdowns in Electric Transmission Lines	30
5. Volumetric Weight of Ice and Frost Deposits; Speed of Precipitation; Wind and Temperature	39

	<u>Page</u>
6. Physical and Meteorological Mechanisms in the Development of Large Ice and Frost Formations, and Areas in Which They Occur	50
7. Study of Icing, Frosting, and Associated Phenomena	63
Part II. Design of Lines in Very Cold Areas	
8. Operational Durability of Conductors and Their Use Beyond Elastic Limits	68
9. Effect of Large External Loads on the Construction of Lines	81
10. Distance Between Conductors, and Their Spacing at the Supports	86
11. Basic Principles in the Construction of High Strength Ice-Bearing Lines	90
12. Use of Small Diameter Conductors in Very Cold Areas	103
Part III. Melting of Ice and Frost Formations by Electric Current, and the Protective Heating of Cables	
13. General Problems in Electrical Melting	106
14. Heat Emission Into the Surrounding Atmosphere	108
15. Heat Expended in Melting Deposits, and the Heating of Iced and Frosted Junction Boxes	119
16. Recommended Design Formulas	121
17. Use of Preventive Heating of Cables, and the Melting of Ice and Frost Formations in Electric Power Systems	124
18. Heating by Short Circuiting and by Connecting Transformers in Opposition	126
19. Heating by Overloading and by Varying the Switching Circuit of a Network	133
20. Heating by Superimposing Currents With the Insertion of Supplementary Voltage in Series	136
21. Heating by Including a Voltage in the Circuit Using Ground Return	143
22. Use of an Insulated Strand in the Conductor and a Combined Method of Heating; Problems Connected With Icing of Cables	159
23. Construction of Electric Transmission Lines With a Deicing System	161
24. Other Methods of Combating Ice and Frost on Electric Transmission Lines	166

Appendixes

1. Construction of an Icing Chart for Electric Power Transmission Lines and Supports	172
2. Graphs of Time Taken to Melt Ice Plotted Against Strength of Current	186
3. Graphs of Time Taken to Melt Frost Plotted Against Strength of Current	189
4. Preventive Heating of Cables	192
5. Bibliography	192
